

Conveyors

Lewis & Raby manufactures and services a variety of conveyors – including chain-driven, belt-driven, and wire mesh – for a range of industries and applications.

We CNC machine individual parts, repair rollers, fabricate conveyor equipment and offer on-site installation.

Our conveyors can be constructed in a range of materials including mild steel and stainless steel for use in the food or medical industries.

We offer paint finishing and galvanising for conveyors which will be used outdoors and in harsh environmental conditions.

All our conveyors are manufactured and repaired to our customers' specifications. Please contact our experienced engineering team to discuss your company's requirements.
