

Gantries and Platforms

Industrial gantries and platforms are used to provide access to machinery for operation, repair and maintenance.

Lewis & Raby manufactures gantries and platforms to British Standard for a range of commercial and industrial applications.

Our gantry platforms can be manufactured in a variety of metals including mild or stainless steel.

For walkways and access stairways we offer aluminium treadplates and galvanised hand-railing.

Vertical access ladders can be manufactured with safety hoops and can be galvanised to prevent corrosion when they are located in harsh environmental conditions.

Gantry platforms can be load-tested if necessary and paint-finished in a colour of your choice. They are usually pre-fabricated and assembled on site in compliance with health and safety regulations.

We construct all our gantries and platforms to our customers' specific requirements.

Please contact our engineering team for further information and a quote for the work.
