

Inspection & testing

Lewis & Raby has facilities to test parts and machinery to ensure they are built and perform to the highest standards. If your equipment needs testing we offer hydro and pneumatic pressure testing facilities in our assembly shop.

We also offer Faro Arm inspections which are carried out by one of our fully trained Faro Arm operators.

The Faro Arm is a coordinate measuring machine (CMM) that enables us to easily gauge product quality. It can be used to produce comprehensive First Article Inspection (FAI) reports in accordance with the ISO 9001 standard.

Email enquiries@lewisandraby.co.uk or phone 0151 546 2882 for more information.
