

Pipe Flanges

Lewis & Raby fabricate specialist pipe flanges where unusually large flanges of more than 10 inches are required to connect pipelines.

Pipe flanges are made in a variety of steel grades including high standard stainless 316 for the food or medical industry.

Our coded welders operate to the ASME IX standard when welding pipe flanges and our work is x-rayed to check the quality of the weld.

All our pipe flanges are made to our customers' specific instructions and they can usually be made within two weeks.

Please contact our experienced engineering team to discuss your requirements.
