

Precision CNC machining

We have a wide range of CNC Machines for precision boring, milling and turning. Our experienced engineers, machine setters and operators will ensure your product is machined to the highest international standards.

Our multi axis CNC machining service is particularly used for the production of complex three dimensional shapes and batch work.

We continue to invest in our machining capacity – which is already one of the largest in the north west region – so we can comfortably manage both small and large machining projects.

Contact enquiries@lewisandraby.co.uk or phone 0151 546 2882 to discuss your machining requirements.
